ENDO FERTI FORUM

ENDOKRINOLOGIE & FERTILITÄT
FÜR KLINIK & PRAXIS

20.-21. März 2026

Universitätsmedizin Mainz

Einladung zu unserer wissenschaftlichen Veranstaltung Endo-Ferti-Forum

Brücke(n) zwischen Unikliniken und Praxen an Rhein und Main(z)

– die aus dem bisherigen Format „Ferti Forum“ ab 2026 hervorgeht –

Freuen Sie sich auf spannende Vorträge und den lebendigen Austausch mit Kolleg:innen und Expert:innen aus Klinik und Praxis. Freitagabend laden wir Sie herzlich zu einem entspannten Empfang ein – eine perfekte Gelegenheit, Kontakte zu knüpfen und den Tag genussvoll ausklingen zu lassen.

Wissenschaftliche Leitung: Univ.-Professorin Annette Hasenburg, Dr. Susanne Theis, Universitätsmedizin Mainz, Sanitätsrat Dr. Werner Harlfinger, BVF Rheinland-Pfalz Dr. Rüdiger Gaase, BVF Hessen Dr. Klaus J. Doubek

Schirmherrschaften: Prof. Nicole Sänger, Uniklinik Bonn, Prof. Jan-Steffen Krüssel, Uniklinik Düsseldorf, Dr. Annette Bachmann, Uniklinik Frankfurt am Main, Prof. Christine Skala, Uniklinik Köln

Preface

D.I.R Annual 2014 – The German IVF-Registry

V. Blumenauer, U. Czeromin, K. Fiedler, C. Gnath, L. Happel, J.-S. Krüssel, M.S. Kupka, A. Tandler-Schneider

Once again it is our great pleasure to present the annual report of the data collected by the German IVF-Registry (D.I.R). The Registry looks back onto more than 30 years of diligent data collection, extraction, and evaluation.

Since 1996, the German IVF-Registry has been electronically collecting data for each initiated treatment cycle. Meanwhile, more than 1.2 million ART cycles have been documented in the database. The prospective documentation as well as the cycle-by-cycle data collection are of particular value and make the German IVF-Registry unique.

By September 8, 2015, 128 of the 131 centers that are organized in the non-profit federal association D.I.R had reported their data to the German IVF-Registry. Because of technical hurdles in the centers, three could not export their data.

87,886 cycles have been documented. A total of 52,988 women have been treated in 2014, resulting in a mean of 1.66 cycles per woman. We are happy to note that despite the grave changes in reimbursement regulations, the number of treatment cycles has been increas-

ing steadily. In 2014, the pregnancy rate (PR) for each type of fresh-cycle treatment has increased to more than a 30% clinical pregnancy rate per embryo transfer (CPR/ET); 32.69% after IVF and 30.76% after ICSI. The CPR/ET of “cryo transfers” (frozen-thawed transfer, mostly in the 2-PN stage) also increased to 23.53%. These data demonstrate the high quality of reproductive medicine in Germany, leading to impressive results even under the restrictive legislation: in accordance with the „Embryo Protection Act“ of 1990, the elective single embryo transfer (eSET) is forbidden in Germany. Egg donation is unlawful as well, and cryopreservation is allowed but usually only of 2-PN stage oocytes. Yet the regulation that only a maximum of three embryos may be transferred has certainly led to positive effects. Due to the increasing quality of stimulation, improved oocyte treatment, and changes in transfer technology, the average number of transferred embryos has decreased by more than 25% in fresh cycles since 1997. By transferring no more than an average of 1.87 embryos after IVF and 1.89 after ICSI, the doctors for reproductive medicine in Germany have continued to adhere to their responsible approach towards the reduction of multiples.

To improve the documentation of pregnancy outcomes, a quality offensive was initiated for the 2014-data collection – with remarkable results: the lost-for-follow-up rate for this annual (cut-off date 2013) has decreased from previously 15.1% to 6.6%! Moreover, while in the 2013-annual only 9 centers achieved a 100% documentation rate, 33 centers reached this goal for the 2014 issue. This fills us with pride since it reflects the great commitment and diligence put forward in the centers.

The results of the comprehensive data collection in the German IVF-Registry and its reports have been cited in numerous scientific publications, nationally as well as internationally, lending support and impetus to scientific research.

They have furthermore contributed to the continuous improvement of quality within the German centers for reproductive medicine. Physicians, biologists, and patients alike have benefited from the tedious work necessary to collect, export, and evaluate as well as publish the data. Therefore, we express our gratitude to all involved:

Thank you and keep up the good work!

1) In 678 cases no IVF- or ICSI treatment was performed. 198 are cases in which oocytes were recovered but nevertheless a cryo transfer was performed

2) Reason: e.g. immature oocytes or no sperm available

3) Mean
